

Integrated Maintenance Management & Project Controls

Maximo-Primavera Integrated Maintenance Management

Maxavera combines the power of IBM[®] Maximo with industry leading Oracle[®] Primavera project planner to create a seamlessly integrated best-of-breed solution for integrated maintenance management and project controls. Maxavera includes hundreds of pre-defined field mappings and business rules based on industry best practices that enable your organization to optimize and streamline shutdowns, turnarounds, outages, daily maintenance and capital projects business processes.

Out-of-the-box functionality

Maxavera is a true packaged solution. It can be installed and already exchanging work order, resources and schedule data between Maximo and Primavera within a couple of hours. It includes hundreds of best-practices predefined mappings and business rules based on years of work control integration experience and system deployments.

Maxavera's standard functionality satisfies 80%-95% of your work control integration requirements the day it is installed. The system's flexible architecture enables the remaining unique aspects of your business process to be configured quickly.

Industry proven

Pipeline Software's work control and capital project integration solutions are used by industry leaders in oil & gas, fossil and nuclear power generation, services and construction engineering.

Broad Maximo and Primavera version support

Maxavera provides the broadest version support for your Maximo and Primavera systems. It includes support for Maximo versions 4.x, 5.x, 6.x, and 7.x as well as Primavera versions P3e, 5.0, 6.0 6.1, 6.2, and P6 v7 and v8.

High performance

Performance for any integration solution is important. When it comes to work control for daily maintenance, plant turnarounds, outages, or fast moving capital projects—high performance becomes critical. Capable of processing thousands of orders per hour, Maxavera is the highest performing Maximo-Primavera integration solution on the market.

Minimal end user training

Your planners and schedulers have enough to do without having to learn another system. Once Maxavera has been configured it works invisibly in the background moving the right data at the right time between your Maximo and Primavera systems.

Rapid implementation

Maxavera reduces the time required to integrate Maximo with Primavera by more than 90% over middleware and custom development solutions. Maxavera is a purpose-built *packaged software application*. Taking a traditional middleware approach would require months and thousands of lines of code to deliver what Maxavera provides as a single, easy to install, fully supported and versioned software application.

Platform agnostic

Maxavera is a fully compliant Java Enterprise J2EE application. It can be deployed on all leading operating systems and J2EE compliant enterprise infrastructure platforms including Oracle BEA WebLogic, IBM WebSphere 7, or Apache Tomcat. *See *supported technologies*.

Supported technologies & versions

Maxavera currently supports the following products and versions :

IBM Maximo

- 4.x, 5.x, 6.x, 7.x

Primavera

- P3e, 5.0, 6.0 6.1, 6.2, and P6 v7 and v8

Microsoft Project

- Project Client 2007 and 2010, Project Server 2007

Application servers

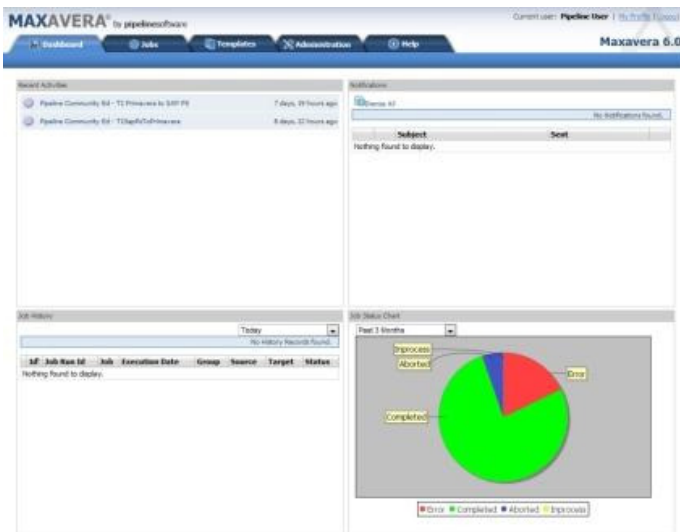

- Oracle BEA WebLogic 10
- IBM WebSphere 7.x
- Apache Tomcat 6.x

Databases

- Oracle 10g, 11g
- Microsoft SQL Server 2005, 2008

Operating systems

- Linux, IBM AIX, Sun Solaris
- Microsoft Windows Server 2003,2008 (32 and 64 bit)

About Maxavera

Maxavera delivers seamless integration of planning, scheduling and work control business processes for asset and project intensive organizations. Maxavera is an intelligent integration hub that transforms stand-alone project planning tools such as Oracle® Primavera and Microsoft® Project into powerful integrated solutions for plant shutdowns, turnarounds, outages, daily maintenance, service delivery and capital projects.

Other Maxavera Integration Solutions

Maxavera provides a suite of prepackaged integrations for best-of-breed planning, scheduling and work management including:

- Maximo — Primavera
- Maximo — MS project
- Maximo — SAP
- SAP — Primavera
- SAP — MS project
- Maxavera Contractor Integration
